## Is Akon City Actually Possible?

- **Akon City will be built near Dakar (capital of West-African country, Senegal)**
- **The city will be powered exclusively by Akoin**
  - To be used for things like electric bills and micro-loans
- **Received official approval and was granted 2000 acres for the city's build**
  - Granted by the President of Senegal
  - More than 6x the size of Tyler Perry Studios
- **Atsu Davoh (CEO of Bitsika) expresses concerns**
  - Claims Nigeria would've been a better location based on 2nd highest African GDP
  - Akon City would be too expensive
- **Georgie Ndirangu (Broadcast Journalist @ BBC Africa) expresses concerns**
  - Makes note of 2017 survey showing only 34% of Senegalese adults owning smartphones. Without smartphone use, the "Akoin" might not work at scale without widespread adoption of smartphones

## Coronavirus Affecting Crypto Prices

- China is home to 40% of the world's top 50 crypto exchanges
- Cliff-like drop off in attendance for crypto-related conferences
- Worries of a heavy blow to the market if money were to stop flowing in these markets
  - PlusToken is one of many sources of funding to the industry
    - Raising \$3B through a ponzi scheme
      - 789000 Ether
      - 26000000 EOS
      - 200000 Bitcoins
    - Now in possession of 1%
- Chinese crypto retailers typically cash in before holidays in order to reinvest for the next year. Similar to new years boom on stock markets
  - Outbreak hit around the tail end of this cycle
- When World Health Organization announced they'll meet up to discuss if it's an outbreak or not, the S&P 500 turned positive
-

## Blockchain and AI To Prevent Lies Told on Resumes

- Workday is an HR Product was announced in Davos, Switzerland at the World Economic Forum
  - system using blockchain to track employees
  - Tracking job history on blockchain, preventing from lying and editing info
  - Employees won't be able to hide info showing them in a bad light
  - Universities will be able to ensure credibility behind the diplomas job seekers cite
- “Employees can go from company to company and carry credentials with them in a private network. It can't be edited by an outside source,” - Aneel Bhursi (Co-Founder and CEO of Workday)
- Already been proven by the International Organization of Migration
  - Logging labour contracts on blockchain
  - “Contract Swapping” mitigation
    - Where workers are pressured into signing less favorable contracts at last second by the crooked employers
- Bhursi claims AI would only further leverage this technology

### **Questions for ChatBot**

- 1) What's Bitcoin
  - a) Bitcoin is a digital currency that was created by Satoshi Nakamoto in January of 2009. Detailed in the infamous “whitepaper”, the mysterious creation offered the promise of lower transaction fees found in traditional online payment systems  
  
Coins are kept on a public ledger in the cloud along with all other transactions. Each is to be verified by a massive amount of computing power.
- 2) What's Altcoin
  - a) Altcoins are digital currency created by various organizations since the debut of Bitcoin. Sometimes offering their own whitepaper, the first altcoin was create after Bitcoin triggered interest in the space of immutable transactable ledgers
- 3) Who Created Bitcoin
  - a) Satoshi Nakamoto was the creator of bitcoin. After creating and releasing the bitcoin whitepaper, he disappeared,

never to be found again. Many claim to be him, but the community has yet to identify a bonafide Satoshi.

4) Why is Bitcoin Volatile

- a) Bitcoin is regarded as a speculative asset that derives its value from community sentiment. This offers vulnerabilities in that there is an open forum for what can produce or set back growth. You can measure the volatility of a coin with the Bitcoin volatility Index.

5) What's the Bitcoin Whitepaper

- a) Bitcoin: A Peer-to-Peer Electronic Cash System was written by Satoshi Nakamoto in 2008. It outlines how peer-to-peer transactions are futile if there is no trust possible with the intermediary. Using Bitcoin to eliminate the possibility of double spending and extending ledger to save CPU power at scale between users.

6) Can Bitcoin be tracked

- a) Yes, wallets typically take your KYC information for trades. Through this, your trades can be reported in a pseudo-anonymous manner. Darknet transactions are even trackable by using products provided by Chainalysis
